

Sustainability Policy

Our portfolio of products are designed and manufactured to help reduce or avoid waste or to assist with material segregation and collection for recycling or composting. Our manufacturing suppliers share our values to sustain a high level of quality, by keeping the environmental impact of the sourcing, selection and use of virgin and recycled materials to a minimum.

We never knowingly compromise our customer's purchasing responsibilities, when we offer products with a recycled content e.g. lifespan.

The materials used are either industrial recycled or post-consumer materials and our sustainable products can be recycled at the end of their useful life.
