WENTERRA®

Compostable bags and sacks

Biobags

Biobags contain vegetable renewable resources, such as *non-genetically* modified cornstarch, that have been compounded with biodegradable polyesters.

Our Biobags are the answer for a clean hygienic collection of compostable kitchen food waste and green garden materials. Liners keep caddies and containers clean, reducing odours and interference from flies.

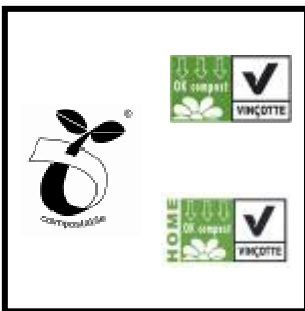

Biobags for Communities and Councils

- liners for kitchen caddies (5 - 10L)
- liners for kerbside containers of 20L - 40L.
- liners for wheeled bins 120/140 L – 240 L
- sacks for the kerbside collection of soft green garden materials and leaves (for example: 50 – 100L)

Biobags for Supermarkets and Drugstores

- 5 - 10L biobags in optimized sales packaging
- liners for bins with a printed paper sleeve
- optional with an insert tag or voucher inside the roll
- T-Shirt handles for shopping bags and waste collection at home

The compostability of our **WENTERRA® biobags** is certified to standard “DIN EN 13432” and “OK compost” .

Some compositions are also certified with “OK compost HOME”.
